Bug in ARI EXT Menu

Posted by xcartay - 2019/11/04 14:25

Appreciated people, i am using your great ARI EXT MENU, but it is got a bug when in Responsive mode. If the main menu has submenus, the submenus displays BELOW or underneath the main menu.

http://www.xaviercartay.com/mon-petit-espace/home-bug

Watch this page on RESPONSIVE mode and hover your mouse over the PESTAÃ'AS Y CEJAS menu item. You will only see from third to fifth menu items, but the first and second items will be underneath the Main Menu.

Thanks in advance for such a great menu, and also i thank you in advance if you could fix it http://www.arisoft.com/images/fbfiles/images/ARI_menu_bug.png

Re:Bug	in	ARI	EXT	Menu

Hello,

Add the following CSS rule to "CSS Styles" parameter in module settings:

.ux-menu-sub>LI {z-index:20000}

Regards, ARI Soft

I am gratefull for your useful and very soon answer to the bug.

I´m leaving the best reviews in JED.

Thanks again :cheer:

Xavier
