## Submenus behind Parent

Posted by Dismas - 2010/08/30 18:09

---

Thanks for the Ext menu...it works great.

I must have a conflict with my template css...because I cannot get the sub menus to overlay the parent menus.

I have attached a file.

The site is at <http://xoomateambuilders.com>

Thanks for your help. <http://www.ari-soft.com/images/fbfiles/images/underlap.jpg>

Hello,

Add the next CSS rule:

```
.ux-menu-container .ux-menu,  
.ux-menu-container .ux-menu LI  
{  
  z-index: 1 !important;  
}
```

```
.ux-menu-container .ux-menu LI.ux-menu-item-parent,  
.ux-menu-container .ux-menu .ux-menu-sub,  
.ux-menu-container .ux-menu .ux-menu-sub LI  
{  
  z-index: 2 !important;  
}
```

Regards,  
ARI Soft

Thank you...it worked.  
I appreciate it much.
