How To Place An Image In The Menu

Posted by thely - 2021/10/03 00:37

_____

Hiâ€¦. I want to replace the usual text menu item with an image that links to the article. (See attached image) Iâ€™m guessing that can be done with a css class statement in the ARI module. Unfortunately I struggle creating class statements and hope you can help with the required css code.

Plusâ€¦. it would be great, but not essential, if the article opened in a JCE MediaBox pop-up (installed and published). Can that be included in the css code?

The image path is: /images/video-menu-button.jpg
The link is to: Article ID 18

Looking forward to any assistance you can provide.
