
Joomla 4.x migration for ARI Ext Menu

Posted by Jefferson49 - 2022/11/20 16:35

Hello users of the ARI Ext Menu,

during the migration of my joomla 3.10 site to joomla 4.x and PHP 8, I recognized that the ARI Ext Menu module is not working with joomla 4.x and PHP 8. Therefore, I created a patch for the ARI Ext Menu, which I provide on Github:
https://github.com/Jefferson49/PHP8_mod_ariextmenu

The joomla 4.x patch (including PHP 8 patch) was developed and tested with:

joomla 4.2.5; but should also run with other joomla 4.x versions

PHP 8.0.23; but should also run with other PHP 8.x versions

ARI Ext Menu 2.2.11 (with PHP 8 patch)

I could only test the patch with the ARI Ext menu on my website. Probably, this is just a subset of the module features.
