## newbie to ARltext how to create a menu?

Posted by rayosx - 2010/09/08 13:53

---

Hi!

I've just downloaded the AriExt extension and after some tries, I can't find how to create a dynamic menu. I added and installed the extension, but the menu appears static. I know I have to create it using css, but, where do I have to do it? I've been looking in the demos site and they are very similar to what I'm looking for, but I don't know how to do it. Any code example or something like this?  
thanks in advanced!

Hello,

Could you provide link to page where we can see the menu on your site? It seems you site template contains incorrect code for removing MooTools library which removes necessary javascript and CSS files for the menu.

Wow!  
what a quick reply, thanks!  
the link is here

thanks!

It seems this problem with SEF configuration in .htaccess file because necessary javascript and CSS files can't be opened in a browser. You can try to open this or this file.

So what should i do?  
i do have access to those files.  
don't really know what to change.

Could you provide .htaccess from your server or temporary access to your Joomla! backend by email that we can investigate this issue?

---

.htaccess file seems correct. We can investigate this issue in more details if you provide temporary access to your Joomla! backend or you can contact hosting support that they investigate this issue because the module includes HTML tags for loading necessary javascript and CSS file but the server doesn't return them.

---

No, this is a problem with server configuration.

Hi again!

I have talked with the server administrators and they say that most of my server configuration can be seen in using the phpinfo command. You can check it here and maybe you will be able to see where is my problem.

---

Thanks again for your answers,  
xavi

---

This isn't PHP issue, probably this problem with configuration of mod\_rewrite or another Apache module.

Ok, so I don't really know how to solve it. I'll check what can I do.

thanks anyway,

xavi
