## Text size, please?

Posted by ddye - 2010/09/16 02:19

---

I like this mod, but I've been tearing my hair out for two hours looking for a way to resize the text for the buttons...

Is there a rule in the css where I can enter the font size? Nothing I do is working.

I would appreciate it so much. I've got a bunch of stuff figured out, but this is driving me crazy!!!!

Thanks in advance.

Hello,

Font size can be defined in module settings. Use 'Font size' parameter for this purpose.

Ah, thank you. Sorry about asking these questions, I'm using Dreamweaver and I'm not used to doing css this way. I was so worried about the css that I didn't think about the module settings...

Any modality to modify only submenu font size so far? How to upgrade to the newer version without overwriting the changes I made to the menu.min.css file?  
Thanks.

You can copy files manual that update the module or copy menu.min.css file to your local machine, upgrade the module through Joomla! installation page and copy your menu.min.css file back. You can try to use the following CSS rule that set font size of sub-menus:

```
.ux-menu-sub A
{
  font-size: 20px !important;
}
```

It didn't do the trick. I put the files in the correct folder this time on the server, cleared browser history and refreshed the page. Any other indication?

PS

In the module parameters the size for the menu is set to 14. It's actually copying that size to the entire menu. I would like to have the main menu size 14 and for the submenus size 12.

Thanks.

It doesn't work because 'AiDa News' add CSS rules in incorrect way. If you open HTML source of the page, you can see the following code:

```
.aidanews {}  
.aidanews a {text-align:left; }
```

Fix it.

Thank you for pointing that. I fixed the Aida problem and a couple of other problems that were generating w3c validator errors. It's my first site in Joomla, that's why I run into problems that I can't solve without help, therefore thank you for your time!! After fixing that what you said, the validator errors and even disabling AiDa news, the submenu font still don't seem to change.

Hello,

Where have you add code which we provided? We don't see it when open HTML source of the page.

---

Use the following:

```
#meniusus .ux-menu-sub A
{
  font-size: 10px !important;
}
```
