
Unique backgrounds for main menu itemsI

Posted by SpeedRicer - 2010/09/16 15:09

I want to add unque backgrounds to the main menu items. Is there a way to select the background property for each ul id or class? I have the menu close to achieving this, I just hope I didn't waste my time. You can see the results here.

<http://realetemp1.socialflyway.com>

Thanks in advance :cheer:

Hello,

Each

- element of the menu has unique CSS class which looks like:

ux-menu-item

where is menu id. The following CSS rule can be used that define unique background for menu item:

```
.ux-menu-container .ux-menu LI.ux-menu-item > A
{
    background-image: ;
}
```

Just replace with necessary menu id.

Thanks! Worked like a charm! :laugh: Have another question though, "When I adjust the padding the borders don't shift with the buttons, I there a way to fix this?," or do I need to add extra space in my images?

What about this?

MainMenuitem->

```
----->SubMenuitem-1 (uniq background-1)-> SubSubMenuitem-1.1 (uniq background-1.1)
----->SubSubMenuitem-1.2 (uniq background-1.2)
----->SubSubMenuitem-1.3 (uniq background-1.3)
----->SubSubMenuitem-2 (uniq background-2)-> SubSubMenuitem-2.1 (uniq background-2.1)
----->SubSubMenuitem-2.2 (uniq background-2.2)
----->SubSubMenuitem-2.3 (uniq background-2.3)
```

Each menu item here has its own background. Is it posible?

Spent about an hour trying to do it.

Hello,

You can use the following CSS rule:

```
UL.ux-menu LI.ux-menu-item A
{
    background: red none;
}
```

Where is ID of menu item. For example if you want to change background of menu item with ID = 19, use the following CSS rule:

```
UL.ux-menu LI.ux-menu-item19 A
{
    background: red none;
}
```
