
Links width issue in IE6

Posted by rupixel - 2010/10/14 14:40

Hello!

I have problems with the links width in IE6, please check <http://69.195.83.189/> to see it in action (you must see it in IE6). The problem is that IE6 shows the links with a 100% width. It's an horizontal menu, check in Firefox 3+ to see it working properly.

Any ideas?

Hello,

This problem with this javascript file which is included by site template for IE 6:

If remove this including the menu will work fine. It seems this script uses for resolving problem with PNG transparency in IE 6.

Regards,
ARI Soft

Good! That's worked fine! I've just deleted the png's references in the menu's css.

Now, the menu appear left-aligned, how can I align it to the right in IE6? It's ok in Firefox 3+.

Thanks for your quick response!

It seems this problem with HTML markup of site template and styles in IE 6. You can try to use the following CSS rules:

```
.menu
{
    text-align: right;
}
.menu .ux-menu
{
    zoom: 1;
    *display: inline;
    text-align: left;
}
```
