
How to use this extension!?

Posted by n123 - 2010/10/22 20:25

It's really dumb, but I'm newbie...

I've been searching on how to use this extension, but I found nothing so far. There's nothing helpful in module manager. I'd like to know how do I add submenus and how to configure everything..

Thanks

Hello,

The module works as standard Joomla! module. More instructions how to setup the module can be found in this post. Video tutorial how to use Joomla! menu manager can be found here. Set 'Parent Item' on menu item settings page that create sub-menu item.

Thanks, this helped.

Now I'm facing new issue - the subitems appear on top of the parent item and when I roll mouse over it, subitems go below the parent item and never hide.. How can I fix this? And how can I move or remove the blue arrow showing that the item has submenus, because it's on top of the text? <http://www.ari-soft.com/images/fbfiles/images/untitled-1752ad84ab9d13b6a9d8c202bd1b3f03.jpg>
