Hello,

Provide link to page where we can see this issue that we can help. If it's private information you can provide it by email.

Regards,  
ARI Soft

Hello,

This conflict with 'Phoca Gallery Slideshow Plugin'. If you disable this plugin the menu will work fine.

Hello,

Thank you for getting back to me. I disabled the plugin and the menu works.

However, even with the plugin active, other menus (i.e. those \*not\* the mainmenu) worked perfectly fine. Is there an issue with how the mainmenu is being rendered? I say this because obviously I want to use the Slideshow plugin and ARI menu and to maybe point towards a potential broader issue?

Thanks again.

Different menu modules can use different javascript framework. "ARI Ext Menu" uses ExtJS framework. You can contact "Phoca Gallery Slideshow Plugin" developers that they fix their extension because this problem with javascript from this extension.
