
Can the submenu be a little wider?

Posted by Kathe - 2010/10/28 20:14

Hi there! This module may do just what I need, and I'm thankful for that. It feels really solid and is not interfering with other scripts on the site--at least as far as I can tell! ;)

By checking out other threads I figured out some of the changes I wanted to make, but I'm still stumped on two things.

1) the submenu is not quite wide enough for the menu item text.

2) the little arrow indicating a menu item has a submenu is not positioned quite right. I'd either like to position it better or get rid of it. :-)

The site where I am implementing the module is here:

Hello,

Your site template contains a lot of specific styles for menu from site template. Do the following that integrate "ARI Ext Menu":

1. Open site template index.php file, find the following code:

```
id="horiz-menu"
```

and replace it with the following code:

```
id="horiz-menu1"
```

2. Add the following CSS rules to "CSS Styles" parameter in module settings:

```
#horiz-menu1
{
  height: 55px;
  background: url("/panacea/templates/rt_versatility4_j15/images/3-horiz-menu-bar.png") repeat-x scroll 0 0 transparent;
  padding: 0;
}
```

```
#horiz-menu1 .ux-menu LI
{
  height: 43px;
}
```

```
#horiz-menu1 .ux-menu LI a
{
  color: #FFF;
  height: 23px;
  border-style: none;
}
```

```
#horiz-menu1 .ux-menu LI a:hover,
#horiz-menu1 .ux-menu LI a:focus,
#horiz-menu1 .ux-menu LI a.ux-menu-link-hover
```

```
{
color: #000;
text-decoration: none;
}

#horiz-menu1 .ux-menu LI,
#horiz-menu1 .ux-menu LI a
{
background: transparent none;
}

#horiz-menu1 .ux-menu-sub
{
background-color: #819F9D;
border: 1px solid #FFF;
}
```

Regards,
ARI Soft

Thanks a million! I appreciate the quick response.

I'd heard about the great service here, and it is true! Thanks again.
