
Submenu Speed

Posted by Frost - 2010/10/30 04:14

Hi,

I've almost got my menu in place now with some great help from the support on the forums. There are a few things left to address.

First, the speed of the submenus when they expand from the parent menu item is slow. There is a very visible rendering delay, and I don't know why.

Second, there is a "separator" graphic to the left of the first menu item ('home') and there shouldn't be one there.

If those two things could be fixed I'd be extremely happy.

Thanks very much.

Hello,

Regarding the second problem, add the following CSS rule:

```
#topmenu .ux-menu A.ux-menu-link-first
{
    background-image: none;
}
```

About the first issue, this problem with Flash object beneath the menu. Set "wMode" property of Flash object to "transparent" that resolve this problem.

Sweet!!

Your support is unbelievable. Thanks so much for the quick response, the menu works great now with those changes.

Cheers!
