## Section - Category - Sumenus

Posted by dss - 2010/10/30 09:01

---

I have spent lot's of time trying to find a mod that will allow me to assign a Section and have it Categories and all articles associated with it as submenus 3 deep. Is this possible with ARI Ext Menu? If so could you please tell me how? Was hoping that I could just assign the Section, give it a menu name and wahla! ;) Any help from anyone who can suggest even another mod that will do this would be very much appreciated!

Have a good one!

Hello,

The module uses menu items from Joomla! menu manager and menu manager doesn't provide ability to select article category and load articles from it.

Thanks for the quick reply! Could you please let me know of something that will work if you know?

Thanks again!
