
Menu width issues

Posted by addyap - 2010/10/31 16:13

Hi,

I have tried to find a solution to my problem, but no luck looking through the forum. For the website www.antonyaddy.com, could anyone please confirm which file I have to modify in order to change the font size and width size of the menu?

Thank you in advance,
Antony

Hello,
Find in module parameters AEM_PARAM_AUTOWIDTH_LABEL and set it to YES . I suggest, since you have submenus, to put the menu on top of site (under the black banner). <http://www.ari-soft.com/images/fbfiles/images/1.JPG>

Hello,
To rivman, it seems the module couldn't install language files because we suppose /language/en-GB/ folder doesn't have writable permissions. Parameters labels should have normal names like "Auto width" and etc.

To addyap, use "Auto width" and "Font size" parameters:

Hello,
Indeed Admin, thanks to pointing that out, you solve 2 problems in one answer. I don't use a English version of Joomla, but i will put a en-GB folder for further modules that don't have my language translation.
PM or email me if you want help with translation to French or Romanian. For now, there is just Spanish and Slovak, right ?
Thank you again for this awesome support and care.

Currently the module contains English, Spanish and Slovak translation. If you wish to create new translation we would be very grateful for this and include it into the next version of the module.

Hello,

The only way to thank you is to contribute to this wonderful product. Here it comes the Romanian translation of module, work in progress for French translation.

Have a nice day. http://www.ari-soft.com/images/fbfiles/files/ro_RO.zip

PS: The Romanian translation don't include characters with diacritics, i don't know if the module support UTF-8 .
