
mod_ariextmenu not viewing in IExplorer?

Posted by outersquare - 2010/11/09 03:34

My website views perfectly in Firefox, Safari (MacOSX and PC), however when viewed on Explorer8 on PC the menu trips out? The menu is out of whack and not inline with the rest of the site?

On my Mac in Explorer 5.2, the menu does not even show?

Is there any way of overcoming this or have I prepared it wrong?

My website is <http://www.loveangels.com.au> and I've attached an image of what I'm viewing on Explorer 8 on PC.

Thank you in advance. http://www.ari-soft.com/images/fbfiles/images/screenshot_explorer.png
