
How to set different color for subitems?

Posted by maorlast - 2010/11/10 17:31

How can i set the subitems to match the color of the item?
i.e if the main item is red than all its subitems will be in the same color?

Sorry for asking so many questions, but your module is fully customizable and can do anything! i love it!

Thanks!

You can try the following CSS rule:

```
#top_menu .yui-skin-sam UL LI.yui-menu-item UL LI.yuimenuitem-selected {  
  background: #F8C60A !important;  
}
```

Where is ID of main menu item.

Regards,
ARI Soft
