
Basic modification

Posted by blackwednesday - 2010/11/21 16:18

Hello,

Perhaps I am just using the wrong search terms, but I am having a lot of trouble locating a useful tutorial (for my particular situation) with the ARI Ext Menu.

I am using the JoomlaPraise template "AudioPraise". The built-in menu system is the worst I have seen of any template, so I decided to give the "ARI Ext Menu" a try. The module itself is pretty awesome, but I can't seem to locate the entries suggested by the various tutorials I have found on this site. I am hoping you can help. I am assuming this is because of JoomlaPraise' non-standard template deployment, but I thought I'd ask the big-dogs to be certain.

The temp-site I am working on is: <http://72.249.106.231/~blackwed>

I have found several tutorials that start with: "open the site template index.php and...."

The JoomlaPraise templates apparently put suggested entries within other files, so following along here isn't doing me much good. Again, I think this is a template issue, nothing to do with the module.

Unless I am misunderstanding what you folks mean when referring to "site template index.php" suggestions such as the one found here: <http://www.ari-soft.com/ARI-Ext-Menu/8387-Beginner-question.html>

"Open site template index.php file, find the following code:

Code:

and replace it with:

Code:

Regards,
ARI Soft"

I have looked within the module files themselves and can't come up with anything. Can someone point me in the right direction, or at least verify what I am doing wrong?

We're using Joomla 1.5.21, with the JoomlaPraise "AudioPraise" template with Legacy mode activated.

Many thanks in advance.

-C

Hello,

We mean index.php file of site template, not file from the module in posts which you found. In your case, this file is located by the following path:

/templates/jp_audiopraise_1.5/index.php

Regards,
ARI Soft

Re:Basic modification

Hello,

What I was saying was this: I have access to that file, I just can't find any of the entries suggested to modify or replace.

Also, I can't seem to make any modifications to this beyond module parameter menus in the administrator section.
Example: I was able to set auto-width from 'yes' to 'no', but styling from there isn't working.

I have admin permissions on this server, and I am clearing both browser-cache, and the joomla cache. Example: I have tried moving the "arrow" image around on the menu, but it stays in the same place.

I am just at a loss as to what's happening. I am sure this isn't a malfunction of the module, but I'll be damned if I can't nail down the problem.

Thanks in advance! <http://www.ari-soft.com/images/fbfiles/images/settings-901c57820ee8318d3548b81675f2650d.jpg>

In your case you can replace the following code in index.php file:

with the next code:

I'd like to thank you for your help. That certainly did the trick.

Would it be bad taste to post a few more questions in this thread, or should I start new ones?

You guys are crazy helpful. :)
