
Ari Ext Menu and Artisteer Template

Posted by timi11 - 2010/11/23 11:52

Hey, I have made a Artisteer Template and will use your ari ext menu.

The Problem is: I can't see the submenu, it will be under the Content.

See it here

Hope you can help for this...

Thanks, timi11 <http://www.ari-soft.com/images/fbfiles/files/template-cc4cf2bf8cac635812c2a2d86bf25fcb.txt>

Hello,

Use the following CSS rules:

```
body .art-contentLayout .art-sidebar1
{
    overflow: visible;
}
```

```
.ux-menu LI
{
    margin: 0;
    padding: 0;
}
```

Regards,
ARI Soft

Hi

I have the same problem with a artisteer template too and this solution doesn't work. Or perhaps I didn't use well.

Here is the print-screen.

<http://www.ari-soft.com/images/fbfiles/images/print.png>
The site is now online so I temporarily disabled the module.

And the template

<http://www.ari-soft.com/images/fbfiles/files/template-be747dee036791d954812470decb596d.txt>

thanks

Wow! fast....

I activate the menu only on this page:
<http://bea.ulb.ac.be/actualites/actu-bea-tv>

Re:Ari Ext Menu and Artisteer Template

Use the following CSS rules:

```
.art-sidebar1
```

```
{  
  position: relative;  
  z-index: 20;  
}
```

```
.art-content
```

```
{  
  position: relative;  
  z-index: 10;  
}
```

```
.ux-menu-container .ux-menu LI
```

```
{  
  background-image: none;  
  margin: 0;  
  padding: 0;  
}
```

Regards,
ARI Soft

Sorry, thanks a lot, your extension is fantastic. I don't can use it without your Help. Thanks you for the fast response!
That is support!
Anyway, this is a great product.
I hope I can come anotherone for Help.

Thanks from Germany, timi11

Sorry for the bad english...

Sorry, it's me again.

on the same website (<http://bea.ulb.ac.be>) I've got a problem I can't solve.

The link on the menu are underline et when you are on the link, they are no more underlined. It's the opposite of your demo.

I try to add some CSS in the module

```
a
{
text-decoration:none;
}
```

and modify the CSS of the module (in the folder JS/CSS or something else) and also to modify all the link on my web page but it remain underlined.

A solution?

Hey, let me see your css file! I will look for Help.

And, can you tell me how you make your Menu in the Top of your page?

Thanks, timi11

Re:Ari Ext Menu and Artisteer Template

Posted by vertebre - 2010/12/04 19:44

Here is my CSS

http://www.ari-soft.com/images/fbfiles/files/template_css.txt

For the menu, if you use Artisteer you only set a module in "user3" position and chekc if you have checked "always show sub-item", that's all.

Hello,

If you want to show "ARI Ext Menu" instead of default menu, assign "ARI Ext Menu" to "user3" module position and disable default menu module.

Regards,
ARI Soft
