
Submenu missing in Ja-Purity II

Posted by lookic - 2010/11/24 12:32

Please helo,

I am using Ja-Purity II template and ARI Ext Menu is perfect for me, but when enable module, I can se only first level of menu.

I have seen previous posts, but do not know what and where to change. Any ideas?

Thanx.

Hello,

Check that "End level" parameter is set to "-1" in module settings. If it doesn't help, provide link to page where we can see the issue.

Regards,
ARI Soft

End level is set to -1.

Problem is I am working in local, no live site yet.

In this case you can open page in a browser, choose "File -> Save Page As" item in menu browser's, choose "Web page, complete" type, save all page files, archive it and send us by email. It can help us investigate this issue on our local machine.

Use the following CSS rules:

```
body DIV DIV.ux-menu-container UL.ux-menu,  
body DIV DIV.ux-menu-container UL.ux-menu UL.ux-menu-sub  
{  
  margin: 0;  
}
```

```
body DIV DIV.ux-menu-container UL.ux-menu LI  
{  
  margin: 0;  
  padding: 0;  
  overflow: visible;  
  padding-left: 0;  
  margin-bottom: 0;  
}
```

```
#ja-content,  
#ja-current-content  
{  
  overflow: visible;  
}
```

Thanks for help.

Unfortunatey it is not working well. Here is the adress of live site so you can see what is the problem. Modul wil be in the left column (almost 100% sure of that). As you can see, while loading page it is showing modul's css for container menu first. Is it possible to fix?

Sory for making trouble.

It doesn't work because you have changed module position. Use the following CSS rules for current position:

```
body #ja-left,  
#ja-left .column  
{  
  overflow: visible;  
}
```
