## Formatting assistance and hidden submenu's

Posted by klipsch - 2010/12/03 17:09

---

My ARI Ext Menu is installed and the submenu items are hidden behind the content to the right. Below is a link to the menu which is on the left side of the page.

Menu on left

Formatting:

I also need some assistance with the look of the menu on the left. I will be creating multiple menu's, one for each department. My end result is for the menu at the above link to look like the menu that is at the link below.

Example

I have looked through a lot of the posts about these issues and noticed that they refer to putting code in the CSS rule. Is this done within the module configuration or is this done in a CSS file? If it is a file, which file and where?

Thank you for your help,  
Steven

Hello,

Use the following CSS rules:

```
body #left-column .icemodule,  
body #left-column .icemodule div div div div  
{  
  overflow: visible;  
}
```

Thank you for the code. That solved the issue of the hidden submenu.

How do I alter the height & width of the menu? I would like it to fill the space on the left. Please let me know if the changes that I need to make are within the module ccs settings or an actual css file.

Thanks,  
Steven

Try the following CSS rules:

```
body #left-column .icemodule div div div div,
```

```
#left-column .icemodule div div div .ux-menu-container
{
padding: 0;
}
```

Thank you for that. It is now left justified as needed. How do I modify the width of the menu items? On the page below is an example of the menu on the left side. I need it to fille the column width.

Example

Thanks for your assistance,  
Steven

---

Add the following CSS rule:

```
#ariextmenu_ariext240 LI.ux-menu-item-main
{
width: 190px !important;
}
```

That worked Great!!!! You guys are so awesome.

If you go to the below link and click on the side Ari Ext menu and hover over Assessor, then hover over Dummy Item, it will branch out the last sub menu.

Example

You will notice that there is a gap between each of the sub menu's that allow you to see the items behind it. Is there a way to get each of these sub menu's to be right against each other?

Thanks again,  
Steven

You assisted me with the width of the menu previously which worked perfectly. I have subsequently copied this module and renamed for another page. The menu looks right except for the width. I look at the CSS Styles info within the module and it is identical to the other menu that appears properly. Please let me know what could be the cause.

Thanks,  
Steven

Where can see the problem? We can't open previously provided link because it requires credentials.

If you want to set specific width of menu items for all menu instances, use the following CSS rule:

```
.ux-menu-container LI.ux-menu-item-main
{
width: 190px !important;
```

---

}
