## width of the menu

Posted by raunhar - 2010/12/08 10:42

---

Pl. see <http://174.120.138.9/~snehj/>

The menu is at Sneh Junior . The Home menu button is of less width. Can I remove the width of the menu or adjust it to fit the block.

Auto Width is set to NO

Hello,

Try the following CSS rule:

```
#ariextmenu_ariext19 LI.ux-menu-item-main
{
    float: none;
}
```

---

The code was added incorrectly. Now it looks like:

```
.inputbox_search
{
    width: 130px;
    height: 18px;

#ariextmenu_ariext19 LI.ux-menu-item-main
{
    float: none;
}
```

but correct should look like:

```
.inputbox_search
{
    width: 130px;
    height: 18px;
```

---

```
}

#ariextmenu_ariext19 LI.ux-menu-item-main
{
  float: none;
}
```

The menu is not working. I have made a submenu under The School, but it is not showing up.

If you want I can forward you the admin login details.

---

It doesn't work due to site template styles. Add the following CSS rule that fix it:

```
.art-blockcontent-body .ux-menu-container ul li
{
  overflow: visible;
}
```

---

Use the next CSS rules that remove border:

```
div.ux-menu-container ul.ux-menu LI.ux-menu-item-main,
div.ux-menu-container ul.ux-menu LI.ux-menu-item-main A
{
  border-style: none;
}
```

Shown, but again the submenu width.

There should be an option of adjusting the menu width in the module parameters.  
I tried ones SWFree menu. There many options were displayed for configuring the menu dropdowns.

---

You can set "Auto width" parameter to "Yes" or modify width through CSS.
