
sub menus hidden behind main page

Posted by allanfalconer - 2010/12/14 19:46

I have tried all of the CSS style additions without any success.

The menus work BUT are hidden behind the main page.

Add the following CSS rules:

```
#ja-container #ja-col1
{
  overflow: visible;
}
```

```
#ja-col1 .ux-menu-container .ux-menu LI
{
  padding: 0;
  background-image: none;
}
```

}

Works now as required.

Excellent response time!

Thanks

Allan

PS Is there a way to make the previous selections invisible...?

Download the latest version of the module and upgrade it on your site, after this set "Hightlight current menu item" parameter to "No".
