
Hide menu item if user is logged in

Posted by pdarnett - 2010/12/15 15:37

I know how to do this for standard menus, by creating a joomla parameter called "only_show_for_guests" then referencing it in the helper.php when the menu is built to miss out out any menu if the user is logged in.

Where's the equivalent section in ari ext menu, I don't mind doing a bit of hand coding, just need to know where.

Why would I want to do this? Well I want to hide the "join us" menu and submenus when people are logged in as they're already members.

Hello,

The module doesn't provide this ability. Template file which is used for rendering menu item is located by the following path:

/modules/mod_ariextmenu/mod_ariextmenu/templates/menu.html.php

You can change it for your needs.

Regards,
ARI Soft
