
Positioning Sub menus

Posted by gargantouas - 2010/12/28 14:36

Dear All,

thank you very much for this wonderful extension. I have successfully installed the ARI Ext Menu on a joomla website and everything is working great.

However there are two small details that need to be attended to.

The link can be found here <http://www.sugarworld.gr/website/>.

1. There is a very tiny gap between the main items and the drop down menus that I would love to know how to eliminate.

2. I would love to position the submenus to the right of the parent menu item, that is the right border of the submenu to be aligned with the right border of the parent item.

Thank you very much in advance

Hello,

1. Use the following CSS rule:

```
.ux-menu .ux-menu-sub
{
    margin-top: -1px;
    margin-left: -1px;
}
```

2. Sorry, but the module doesn't provide this ability.

Regards,
ARI Soft
