
A Fundamental Question

Posted by enginemike - 2010/12/30 23:22

Hello

I like your menu a lot and want to customize it.

I have read thru all the questions and tried applying your suggestions.

I had assumed that I needed to modify modules/mod_ariextmenu/mod_ariextmenu/js/css/menu.css.

Nothing is happening. What am I doing wrong? Am I wrong about the file to modify?

I have just downloaded the Extmenu extensiion and so far am loving it, though still have to get some stuff working. thought I would reply to this question, hope is ok.

Maybe you need to also look at the menu.min.css in the same folder?

are you using Firefox browser? if you are you should download their Firebug Extension, it is great for web development, and more relevant for your question, it lets you look at specific areas of your site and find out which .css file it is you need to change, and where to find it!

Good luck!

Hello,

To enginemike, judyzie is right. Edit menu.min.css file. It is minified version of menu.css file.

Regards,
ARI Soft
