## HOW TO OPEN EXTERNAL LINK MENU IN ARI COLORBOX?

Posted by cubalibre - 2011/01/03 16:23

---

Hello,

I have installed ARI EXT MENU and Ari Colorbox.

I then connected ARI EXT MENU to my joomla menu.

Some nodes of this menu are configured to open an PDF external file (external link) in a new window.

I wish that these files were opened in a Ari Colorbox popup.

How can I do?

Nico

Hello,

Currently "ARI Colorbox" doesn't provide this ability, it can be done with help "ARI Sexy Links" plugin from ARI Sexy Lightbox package. If you want to do it with help "ARI Colorbox", we can create new plugin which helps to do this, but it takes 1 - 2 days.

Yes,

I can wait for the development of this plugin. Will be added to the commercial downloads?

I had a look at ARI LIGHTBOX SEXY .....

Can I have others animation styles from that (flash like) presented in the demo?

Could you explain in more details what animation type do you want to use?

Regards.

---

Currently "ARI Colorbox" doesn't provide this ability, it can be done with help "ARI Sexy Links" plugin from ARI Sexy Lightbox package.

this could be a solution ... but I wonder if "Ari Sexy Links " can do simpler animations than the demo ... how does Colorbox ....

However, for my problem I've seen enough that Ari Ext Menu allow you to assign a class to the anchor ... I tried to make this change to the file mod\_ariextmenu/templates/ menu.html.php:

"ARI Sexy Lightbox" provides ability to remove shake animation. About modification of "ARI Ext Menu", this approach will work with "System - ARI Colorbox" plugin. One question, what about new plugin, is it required or modified "ARI Ext Menu" is suitable for your needs?

I think that changing Ari Ext Menu may be suitable.

There should be new parameters in Ari Ext Menu configuration:

- 1) classame (aricolorbox default)
- 2) width
- 3) height
- 4) theme (1,2,3,4,5) (if possible....)
- 5) trigger:how to open a link (1,2,3)... defined in the configuration menu of the external links to determine which links must affected by this action

Download this change can be set Commercial

We have added new "System - ARI Colorbox Links" plugin to "ARI Colorbox" package. This plugin provides ability to attach colorbox to necessary links. Download the latest version of the package, upgrade "ARI Colorbox" module and install "System - ARI Colorbox Links" plugin. If you want to attach colorbox to specific links in "ARI Ext Menu", place the following code into textarea on plugin setting page:

```
".ux-menu a"||width=350&height=300
```

Where ITEM\_ID is ID of menu item which will be assigned with colorbox. For example if you want to attach colorbox to menu item with ID = 50, use the following code:

```
".ux-menu a"||width=350&height=300
```

Thanks you!!

Nice job!

I'd like also ask if i can have another way to connect aricolorbox and links on the Ari Ext Menu: I ask you to use the parameter when you defined the menu: how to open the link....in the same window ... another... and so on.

I wonder if can be put a new parameter in the Ari Ext Menu configuration to open, for example, with the class "aricolobox" (default) or other class , all the menus for which it was established that it should open in another window. I wonder if you can change the Ari ext menu by implementing this new capability...

In my opinion, are also new Ari Ext Menu parameters that might be useful:window width, height, anchor classname, menu items id list.

Nico

Thank you for your ideas. We will think about implementation them in a future release. Currently colorbox can be attached to links on a page with help "System - ARI Colorbox Links" plugin.
