
Adjust the width in drop down menu

Posted by stanum - 2011/01/04 08:26

Hi,

I bet that you may have received the question thousands time. I have find the same topic and tried the solution you gave in another topic. But it doesnt work for me.

The problem with drop down menu is, as you can see on the attachment. How can i adjust the width so the menu can have same width without depending solely on the text.

Forgive if my explanation are not quite right. :)

Hello,

Set "Auto width" parameter to "Yes", if it doesn't help provide link to page where we can see this issue because it can be a problem with site template CSS styles.

Regards,
ARI Soft

We can try to help if you provide local copy of the page with the menu. For this open the page in a browser, choose 'File - > Save Page As' menu item in browser's menu, choose 'Web page, complete' option, save all page files into your disk, archive them and send us by email.

Use the following CSS rule:

```
#pillmenu .ux-menu-sub a
{
float: none;
text-align: left;
}
```

Its Works! Thanks!

By the way, is it possible to remove the 'arrow' image on the box? If you can see at the image at my 1st post. It seem the 'arrow' does not locate proportionately with the text. Furthermore, its looks clean too. Thanks

Re:Adjust the width in drop down menu

Posted by admin - 2011/01/04 14:43

You are welcome. The following CSS rule can be used that hide arrow icon:

```
span.ux-menu-arrow
{
display: none;
}
```

Hey i'm havin that problem as well, infact my menu doesnt fit within the confines of the template, meaning it doesnt inherit the border of the template, i just falls unto the page just like that. Nehow i wanna increase my width to the max length of that column but it doesnt auto size to the end of the column. Also in which css file should i put the rule that u posted?

Hello,

Provide link to page where we can see the menu on your site.

Regards,
ARI Soft
