
ARI EXT MENU OVERLAY OTHERS MENUS

Posted by cubalibre - 2011/01/04 10:10

Hello,

how I manage ari ext menu overlay?
I tried z-index parameter but it not work

On my site, Ari ext menu overlay the suckerfish main menu:
http://www.sviluppointernet.com/index.php?option=com_content&view=article&id=5&Itemid=321

Thanks you.

Nico

Hello,

This problem with site template styles. Add the following CSS rules that fix it:

```
DIV#s5_menuback
{
  position: relative;
  z-index: 20;
}
```

```
DIV.s5_wrap
{
  position: relative;
  z-index: 10;
}
```

Regards,
ARI Soft
