Ari Hex Menu - submenus problem
Posted by cubalibre - 2011/01/10 21:02
_____

Submenus are hidden.
The menu is blocked from div container and not open the submenus.

http://www.sviluppointernet.com/index.php?option=com_content&view=article&id=5&Itemid=321

bye Nico

_____

Hello,

This a problem with site template styles. Add the following CSS rule:

.s5_wrap .s5_roundedmm
{
 overflow: visible;
}

Regards,
ARI Soft

_____

Use the next CSS rules:

.s5_wrap .s5_roundedmm
{
 overflow: visible;
}

DIV#s5_bottomback
{
 position: relative;
}

DIV#s5_topgradient_back
{
 position: relative;
 z-index: 1;
}

Regards,
ARI Soft

your support is excellent! There is still the problem in the footer layers as you can see by opening the last entry in the menu on the right ...

http://www.sviluppointernet.com/index.php?option=com_content&view=article&id=5&Itemid=321

bye,
Nico

_____

It requires to modify site template HTML layout and style="z-index:9" attribute to container which contains footer. It can be done with help custom CSS code because "s5_wrap" is non-unique CSS class.
