Submenu on the left of the parent menu

Posted by simaoss - 2011/01/12 18:36

_____

Hello,

This module is great, thank you for the excelent work.

I'm having some problems configuring the css in a probably common question, but can't find the answer in the forum so here it goes.

Need to place a vertical menu on the right sidebar of a site, so the submenu items must appear on the left of the parent menuitems.

Already change some css properties but probably there is a better way because the parent item becomes inactive when the submenu is showing.

The site: http://www.zutil.com/box4 (2Ñ" link from the top right)

The css used:

```
#ariextmenu_ariext24 A
{
width:175px;
}
#ariextmenu_ariext24 .ux-menu-link-parent
{
width:165px;
}

#ariextmenu_ariext24 .ux-menu .ux-menu-sub
{
left:-207px;
}

BODY .ux-menu A:focus,
BODY .ux-menu A:hover,
BODY .ux-menu A.ux-menu-link-hover
{
  background: #000000 none;
}
BODY .ux-menu A.ux-menu-link
{
  background: #000000 none;
}
BODY .ux-menu .ux-menu-sub LI,
BODY .ux-menu .ux-menu-sub LI A
{
  left:-207px;
  top:-3px;
  text-align: left;
}
```

Thanks you

==

_____

Hello,

Unfortunately the module doesn't support this ability. It requires modification of javascript code that add this ability.

Regards,
ARI Soft

---

ok,
bad luck.

Thanks anyway
