sometimes wrong submenu

Posted by midy08 - 2012/01/28 17:20

_____

Hello,

I'm using ARI Ext Menu on my website (joomla 1.7). The funny thing is that this menu works fine sometimes but then again not at all. The submenu is then displayed and is not fully appear superimposed on a very small space so that you can not read. Even if the page invites (F5) will not change it. It only helps if you just press the back button. What can I do about it, that it shows up correctly?

Thank you in advance Midy

_____

Hello,

Provide a link to a page where we can see described problem and specify what browser(s) you use.

Regards,
ARI Soft
