
REQ: Always Show Submenus YES/NO

Posted by aptsites - 2010/07/30 15:46

Can you please add the following field to YUI Menu and Ext Menu:

'Always show submenu items YES/NO'.

The explanation in mod_mainmenu is: 'Display all submenu, regardless of whether or not parent is active'.

Thanks,

Andre

Hello,

Core Joomla! main menu is static menu and 'Always show sub-menu Items' option is used that indicate display or not sub-menu items in other main menu items except active main menu item. 'ARI YUI Menu' and 'ARI Ext Menu' create dynamic menu and it does not make sense to use this option.

But I think this feature is needed if I want to use YUI Menu to show only a subtree of a menu.

For example, using the new fields START and END level, if I specify START=1, END=9 I want the YUI Menu module to render only the active subtree.

Now, I get all subtrees of the menu. It makes a START=1 config useless.

Or am I missing something?

Andre

Download and re-install the module, please. It contains new parameter 'Show only active sub-menus'.
