## Changing root level

Posted by stalker780 - 2010/09/16 15:47

---

Most menus can change root level, so that the sub-menu is on top.

Is this ability in the future plans?

For example "mod\_exmenu-j15" has option "Parent Menu Item".

"SWMenu" also has this ability.

This lets to create many modules in articles with active sub-menus, to see in what article you are.

And as I read in other topic there is no ability to set width of menu to 100%. That would be very usefull too.

In all other ways it is a very good and fast module. Thanks.

Hello,

Thank you for your suggestions. We'll think about implementation these features in a future release.

Regards,  
ARI Soft
