I have a problem with the module mod_ariquiztopres
Posted by vasvirshich - 2011/04/18 15:13

_____

I've been using ARI Quiz Lite. I have a problem with the module mod_ariquiztopresult.

Despite the fact that in the settings set to "show the top 10 results, showing only one with errors. User scored 13 out of 15 correct answers. The module mod_ariquizlastresult shows everything correctly, but the module mod_ariquiztopresult only one user and with the wrong result.

In what may be the reason?

Hello,

Is it possible to provide temporary access to your Joomla! backend by email that we can investigate the problem?

Regards,
ARI Soft

_____

Thanks. This is not a bug, the module shows the best result for each quiz. It doesn't show several results for one quiz.

_____

Then I really got confused.

I use only one quiz. Which module to use to show 5-10 the best results.

And why is the percentage of correct answers in the module "Latest" and "The Best" differ?

Thanks

_____

"ARI Quiz Lite" doesn't provide ability to show several top results for one quiz, but "ARI Quiz" supports this ability.

"Latest results" and "Top results" modules can show different results. For example if a user takes the same quiz twice and earn 70% and 55%. In this case "Latest results" shows 55%, but "Top results" shows 70%.

_____

Yes, but I can take the same quiz only once. That's why I worry.

_____

Could you enable our temporary account on your site and specify which user results are shown incorrectly?

_____

Try now please. We have updated the extension on your site and now it shows several top results for one quiz.

_____

Great! Exactly as I wanted.

Thank you for your help.

It is a pity that the opportunity was not provided in the free version.
