Help serves me, I have created a game to questions and I would like to create some credits so that to limit the possibility to the consumers to be able to answer how many times wants. I would like that is to create or to find a system where can for instance give the possibility to the consumers to be able to give some credits to every consumer where every time that you/they answer to the quizz is climbed him from there one..... is it possible to do this? I use com_arquizlite

You excuse for the English but I am Italian and I have used a translator.

Hello,

The extension provides ability to define attempt count for a quiz, but it doesn't provide ability to set attempt count for specific question(s) from a quiz. Use "Attempt count" parameter in quiz settings to set attempt count for necessary quiz.

Regards,
ARI Soft
