_____

hi, I have a problem, I have created a quiz and I have also created a page of the results, however when the consumer clicca on view the results don't go out. have I mistaken something? The photo that I have attached is the page that goes out me after having drawn on reuslt. http://www.ari-soft.com/images/fbfiles/images/result.jpg

_____

Hello,

Choose appropriate text template in "Successful Template" and "Failed Template" parameters in quiz settings.

Regards,
ARI Soft

_____

Hi, thanks, I have another question. How can I do for allowing the consumer that the results see to be able to choose the quiz that has done? Because if clicca on results the list of all the quizes goes out. However he/she wants to see particularly one it has to find again him/it in the whole list. Does a way exist where I can also send a chart that brings the exact answers and the answers that you/he/she has put the consumer as the chart that it appears however in the menÑ‰ administrator to the consumer, would I like therefore is to be able to send the chart with the exact answers and the answers that you/he/she has put the consumer through e-mail, possible?

_____

Hello,

The extension can show quizzes results for registered users. You can create link to results page in Joomla! menu manager: "Internal Link -> ARI Quiz Lite -> Results -> Quizzes Results". The extension doesn't show results in chart view, but you can modify the extension for your needs.

Regards,
ARI Soft
