Multiple Choice - different score for each choice

Posted by bins - 2012/04/01 16:59

_____

I want to build a multiple choice questionnaire, which is building a profile i.e. there are no right/wrong answers.

Each answer needs to score points and the total points give a result.

Can AQL manage this?

_____

Hello,

"ARI Quiz Lite" doesn't support described ability.

Regards,
ARI Soft
