Ari Quiz Lite not appearing on front end Posted by mreading33 - 2012/08/28 00:43

Hello,

I have installed Ari Quiz Lite onto the backend of my joomla 2.5 website. Once installed, I enabled the Ari Quiz lite test results module and used the components tab to create the respective guiz, guestions, categories etc. However on the front end of the website the only thing that appears is the title of the module without the content created in the components. Any ideas as to what I missed?

Thank you,

Hello,

Results module shows results for passed guizzes. The module shows nothing if nobody takes a guiz.

If you want to create a link to a page with guizzes, open Joomla! menu manager and create new menu item type with type "Quiz List layout":
