
Multiple Correct Answers

Posted by bmmcwhirt - 2012/09/22 23:42

I am using the ARI Quiz Lite to evaluate the software but I'm unable to figure out how to allow multiple correct answers.

for a correct answer A + D must be selected.

Thanks! My initial interpretation of 'Multiple Question' was different. Now it makes sense.

Something odd is happening when I use the Multiple question. It's stripping out all the spaces from the question.

What is the answer?

becomes

Whatistheanswer?

I can correct it and it's fine but if you switch from 'single' to 'multiple' it strips out all the spaces of the question, but not the answers.

EDIT:

This happens when pasting from a MS Office 2011(Mac) file. The odd thing is the questions are pated from the same file and don't have formating issue.

How we can reproduce the problem?

Regards,
ARI Soft

I am trying to determine if it's Joomla or the quiz module.

The process:

copy formatted text from Microsoft office (I'm using the mac version)

Paste into the question and save

edit question and change to multiple question and save

The answer fields do not seem to be affected, only the question field.

Try to switch off WYSIWYG editor.
