
Only one of ten questions displaying..

Posted by rewindkid - 2013/01/02 10:02

Hi there! I've created a quiz but only one of the ten questions I've created are displaying. The first quiz I made worked fine. I've tried adjusting the question count with no luck.

<http://jonashby.com/poker/index.php/mathquiz>

Any ideas?

Hello,

Check "Question count" parameter in quiz and question categories settings and finish previous quiz session.

Regards,
ARI Soft

No luck. I cleared my cache, the question count is correct. I'm stumped. How do you finish a quiz session?

Open the quiz on frontend and complete it. After this start the quiz again.

If it doesn't help, could you provide a temporary access to your J! backend by email so we can investigate the problem?

That got it. My question count was correct in the Quiz options, but not the Question Category. Out of curiosity, why have a question count option in the question category? Can't this be automatically determined by the quiz contents?

Quiz questions can be assigned to different question categories and it is possible to define in question category how many questions should be selected from the category. If you want to select all question from a question category, set "Question count" parameter to 0.
