
How We Can Add Meta Robots? It is easy?

Posted by uriel45 - 2013/05/19 07:08

Is there a way to add the Meta Robots inside the extension?

I just check the Noindex plus follow inside the Menu Item I create from this component but it is not working.

Is there a way to fix this?

Hello,

Open \administrator\components\com_ariquizlite\kernel\Web\class\UserQuizPageBase.php file and add the following code to "_init" method:

```
$app = JFactory::getApplication();
$params = $app->getParams();
if ($params)
{
    $robots = $params->get('robots');
    if ($robots)
    {
        $doc = JFactory::getDocument();
        $doc->setMetadata('robots', $robots);
    }
}
```

Regards,
ARI Soft

Thanks it does works.

Great support, I soon will send you some traffic from my Joomla Database users, so they can check your extensions.

To apply the changes I just did this.

I change this around line 43 or so:

```
function _init()
{
    global $Itemid;
    $this->_resultController = new AriQuizResultController();
    $this->_quizController = new AriQuizController();
    $this->addVar('Itemid', $Itemid);
    parent::_init();
}
```

To this

```
function _init()
{
    global $Itemid;
    $this->_resultController = new AriQuizResultController();
    $this->_quizController = new AriQuizController();
    $this->addVar('Itemid', $Itemid);
    parent::_init();
    $app = JFactory::getApplication();
    $params = $app->getParams();
    if ($params)
    {
        $robots = $params->get('robots');
        if ($robots)
        {
            $doc = JFactory::getDocument();
            $doc->setMetadata('robots', $robots);
        }
    }
}
```
