
Show username and descending sort in stat_page

Posted by Sandro Panzeri - 2010/05/18 14:49

He.

I write from Italy, excuse me for my english.

I don't know PHP but I need to show in the stat_page (I think the file is: quiz_stat.html.php) the name of the user (or guest) and see the records not in order ascending but descending (the latest at top).

Someone can help me?

Thank'you very much.

Sandro

Hello,

If you want to invert results ordering, open quiz_stat.html.php file and use the following code:

```
$results = array_reverse($processPage->getVar('results'));
```

instead of

```
$results = $processPage->getVar('results');
```

Regarding new column with user name, it requires additional coding and you can it by yourself. In other hand, quiz statistics page shows results only for current user and this column will contain the same values.

Regards,

ARI Soft

Ok, good.

Many thanks. ;)
