
summary table of all quizzes

Posted by brugal - 2013/07/31 11:23

If I have more than one quizz available, can i make a summary table for a registered user to show all his outcomes?

Hello,

It is possible to create a menu item in Joomla! menu manager for the page where register users can see quizzes results. For this set menu item type to "ARI Quiz Lite -> Quizzes Results".

Regards,
ARI Soft

First question: In the same way that you can put "ari quiz lite" in an article by using "ARI Quiz Lite in Content", is it possible to put "quizzes results" in an article?

Second question: how can I edit the summary table that appears in "quizzes results" by default?

1. Joomla! modules can be loaded into articles with help of "Content - Load Module" standard Joomla! plugin or with help of "Module Plant" or "Modules Anywhere" 3rd party plugins.

2. What do you want to edit?

1: Thanks! I'll try it

2: I want to eliminate some columns of the table, and I want to change the titles names (can I get this by editing "languages frontend" in menu?)

2. You can modify template file of quizzes results page:

\components\com_arquizlite\view\quiz_stat.html.php
