
Allvideos Issue

Posted by munchman - 2013/08/18 10:15

Hi, from what I have read I am supposed to be able to imbed an audio file into a question using allvideos. I have the correct path in allvideos and have tested in a normal article without issue. In my question front end it just shows text {mp3}file{/mp3}

I need my audio to show up on desktop and mobile devices - is that something Ari is compatible with?

Any help of guidance would be much appreciated

Mant thanks, Ben

Hello,

AllVideo extension can be used with "ARI Quiz" component.

Regards,
ARI Soft
