
Upgrade to 1.2.7 Quiz won't start after

Posted by Daws - 2014/11/28 10:26

Hello, after upgrading com_ariquizlite v1.2.6 to v1.2.7, when user choose an existent quiz from Quiz List, first page is shown, but clicking on 'Continue' button leads to 'HTTP 500 Internal server error' (url is the link to quiz '/index.php?Itemid=500').

I tried to create a new quiz, but same result.

What could I do?

Thank you in advance

=====

Hello,

Could you send a link to a quiz where the problem occurs and a temporary access to your J! backend by email so we can investigate it?

Regards,
ARI Soft

Investigating under Joomla Extension Manager I noticed that com_ariquizlite version was not shown, so I uninstalled and reinstalled v1.2.7 and now it seems to work fine..

Thank you

Dear Admin!

So I reinstalled Ari Quiz Lite as you suggested after deleting tables with prefix "#_ari".

Now everything seems perfect but when I try to run the quiz (with 2 questions in it) which is invoked in Top menu "UNDP Project -> POP Program" (<http://zhasyldamu.kz/en/undp/pop-program.html>).

After I hit "Continue" no questions shows up except "Developed by ARI Soft" label.

Could you please help me?

Hello,

The page is not available. Check it please.

Regards,
ARI Soft
