_____

We don't know how you implement images saving, but in general, you can save references between images and question version id and select necessary images on the component backend and display them.

_____

I am uploading a image with one unique name in the system....

The image is saved with unique name.....
With that name i want to show that image in the admin side..

I create folder to save those images

Thanks
Phani

_____

Is this unique name based on question version id and quiz statistics id? If not, it requires to save reference between image and question version id and quiz statistics id that you can find this image later.

_____

Specify in details where you save images, if you save image name in database, specify in what table you save it.

Regards,
ARI Soft

_____

I am Saving image in system only not in database.....

It is not saving in database http://www.ari-soft.com/images/fbfiles/files/picture-fc251c09ec5b279c64f55de1fa534fdd.zip

_____

We can suggest to store reference between images and questions in database using QuestionVersionId field as key. It helps to select all associated images with a question by QuestionVersionId field.

Regards,
ARI Soft

_____

In database it is showing like this.....

==

Re:Pic Upload Question
Posted by admin - 2010/07/23 10:18
_____

You can create new table where you can store references between images and questions or store this references in questions XML.

Regards,
ARI Soft
