
Time when the user submits the exam

Posted by batereylor89 - 2015/09/09 20:09

Hello

Install Quiz Lite Ari component and works perfectly . But not recording the exact time when the user submits the exam.

Revice and configuration of Joomla server time zone and right.

Thanks for the help

Hello,

Could you explain in more details what's wrong with quiz end date?

Regards,
ARI Soft

Hello

The user submits the exam at 13:00 and the system records a totally different time

Hello,

The extension saves all dates in database in UTC timezone and then show it on frontend/backend based on timezone of currently logged user/Joomla! time zone.

Open /administrator/components/com_ariquizzle/kernel/Date/class.Date.php file and try to replace the following code in "_getTimeZone" method:

```
$tz = -$tz->getOffset($dateTime) / 3600;
```

with the following one:

```
$tz = $tz->getOffset($dateTime) / 3600;
```

I have the same problem with aridatatables.
I used {\$ value | date format: d F H Y: i} in Column Settings-> Format but returns me two hours less
Thank You
omerva

The extension saves dates in UTC. If want to convert it to another timezone, use CONVERT_TZ MySQL function in an SQL query.
