Send to eamil quiz results in JPG, PDF format
Posted by Toktassynov - 2016/11/30 19:09
_____

Dear Admin,

I have prepared an output template to send as an email (both for forwarding and when clicking "send to email")

The output is div element with background image as a certificate.

In both cases I get only $parameters with no background image on my email (see pic. 1) whereas I get the right thing when I hit the "print" button (see pic.2)

Can you please help? Is there any way to send quiz result to an email as a JPG or PDF?

Thank you very much.

_____

Use the full path to the image (for example http://domain.com/images/bg.jpg instead of /images/bg.jpg or images/bg.jpg)

Regards,
ARI Soft

Hello, Admin.
I figured it out with image.
But still there is a problem with parameters $userScore etc.
I have put them in tag with absolute position. It seems that they are only position correctly when printing, but there are not positioned as I wanted when sent via email.

Could you please help to sort this out.

Moreover, is there any way I can convert output html to Jpg format or something?

Could you also please tell how can I customize $EndDate?
Something like {$EndDate|date_format:m-d-Y} that I found on forum, but it doesn't work.

Thanks!!

_____

1. It is possible to use different templates for print view and mail text. For this use "Successful Email Template", "Failed Email Template", "Successful Print Template" and "Failed Print Template" parameters in quiz settings.

2. "ARI Quiz Lite" doesn't support ability to apply filters for predefined variables. This feature is supported by "ARI Quiz".

Regards,
ARI Soft
