Quizz question count doesn\'t take the correct valu
Posted by mircea.t - 2018/06/26 05:25
_____

Hello,

I have twelve (12) categories in a quiz and each category have 15 questions. "Question count" option for each category is set to 1 in order to take only one question randomly.

In Quiz settings the "question count" option is set to 12.

The problem is that when i run the quiz, i always get only 10 questions. No matter what value was set there are only 10 questions displayed.

How can i make it work?

Thank you

P.S: i'm using Ari quiz on localhost for testing, can't provide any login information.

Hello,

Check that you completed the previous quiz session and start a new one. If it doesn't help, reproduce the problem on a test server and provide a temporary access by email so we can investigate it.

Regards,
ARI Soft
