
Problems with language

Posted by RobertG - 2020/04/20 06:34

Hi,

I'm testing ARI Quiz Lite before asking my client to buy the commercial version, but can't use french language: I added a language, changed some terms but it can't be set to default in the administration. I check the radio button for language and frontend language, open another tab and when I re-open the language et frontend radio button are unchecked. What is my mistake?

Thanks for your help!
Robert

Hello,

Is it possible to see the problem anywhere?

Regards,
ARI Soft

Hi,

You can't no more see as the problem is juste resolved. ;) I previously translated the ini files so the administrator menu is in French. Then I found the tab for translating in the language page of ARIQuiz and translated some terms.

But I checked many times the french language in "language" and "frontend language" and radio remains blank the other day.

I now tried another time after your reply: for the frontend language when I clicked the radio button on the "French" line, it didn't work, when I selected and clicked on tne "default" button on tne top, it didn't work. But finally it worked whe I clicked on the button without selecting the line! Then I went to the "Language" tab and clicked on the radio and it works too!

Thanks!
Regards,
Robert
